

4/2- and 4/3-way proportional directional valves, direct operated, without electrical position feedback, without/with integrated electronics (OBE)

RE 29055/10.05
Replaces: 08.01

1/16

Types 4WRA and 4WRAE

Nominal sizes 6 and 10
Component series 2X
Maximum operating pressure 315 bar
Maximum flow: 42 l/min (NS6)
75 l/min (NS10)

Type 4WRAE 6 ...-2X/G24K31/V
with integrated electronics (OBE)

Typ 4WRA 10 ...-2X/G24...K4/V

Features

- Direct operated proportional directional valve without electrical position feedback and integrated electronics (OBE) for type 4WRAE
- Control the direction and magnitude of a flow
- Actuation by means of proportional solenoids with central thread and removable coil
- For subplate mounting:
 - Connection position to ISO 4401
 - Subplates to catalogue sheets RE 45052 (NS6) or RE 45054 (NS10) separate order, see page 12 to 15
- Spring centred control spool
- Control electronics
 - 4WRAE:
 - integrated electronics (OBE) with voltage input or current input (A1 resp. F1)
 - 4WRA:
 - digital or analogue amplifier in Eurocard format (separate order)
 - analogue module amplifier

Spool symbols

With spool symbols E1- and W1-:
 P → A: $q_{V \max}$ B → T: $q_V/2$
 P → B: $q_V/2$ A → T: $q_{V \max}$

Note:
 With spools W and WA, in the neutral position, there is a connection from A to T and B to T with approx. 3 % of the relevant nominal cross-section.

Function, section

The 4/2- and 4/3-way proportional directional valves are designed as direct operated components for subplate mounting. They are actuated by means of proportional solenoids with central thread and removable coil. The solenoids are controlled either by external control electronics (type 4WRA) or by integrated control electronics (type 4WRAE).

Design:

The valves basically consist of:

- Housing (1) with mounting surface
- Control spool (2) with compression springs (3 and 4)
- Solenoids (5 and 6) with central thread
- Optional integrated electronics (7)

Function:

- With the solenoids (5 and 6) de-energised, the control spool (2) is held in the central position by compression springs (3 and 4)
- Direct actuation of the control spool (2) by energising a proportional solenoid
E.g. energisation of solenoid "b" (6)
→ The control spool (2) is moved to the left in proportion to the electrical input signal
→ connection from P to A and B to T via orifice-like cross-sections with progressive flow characteristics
- De-energisation of the solenoid (6)
→ The control spool (2) is returned to the central position by compression spring (3)

Type 4WRA 6...-2X/...

Type 4WRAE 10...-2X/...

Valve with 2 spool positions:

(Type 4WRA...A...)

In principle, the function of this valve version corresponds to that of the valve with 3 spool positions. However, the valves with 2 spool positions are **only fitted with solenoid "a"**. Instead of the 2nd proportional solenoid a plug (8.1) is fitted for NS 6 or for NS 10 a cover (8.2).

Note for type 4WRA 6...-2X/...:

Draining of the tank line is to be avoided. With the appropriate installation conditions, a back pressure valve is to be installed (back pressure approx. 2 bar).

Pin allocation of the component plug

Integrated control electronics (see below)

Pin allocation	Contact	Signal
Supply voltage	A	24 VDC (19 to 35 VDC)
	B	GND
	C	n.c. ¹⁾
Differential amplifier input	D	Com. value ($\pm 10\text{ V} / 4\text{ to }20\text{ mA}$)
	E	reference potential
	F	n.c.

Com. value: Positive command value (0 to 10 V or 12 to 20 mA) at D and reference potential to E causes flow from P to A and B to T.

Negative command value (0 to - 10 V or 12 to 4 mA) at D and reference potential to E causes flow from P to B and A to T.

For valves with a solenoid on side „A“ (spool variants **EA** and **WA**) a positive command value at D and reference potential to E (NS 6: 4 to 20 mA and NS 10: 12 to 20 mA) causes flow from P to B and A to T.

Connection cable: Recommendation: – up to 25 m cable length type LiYCY 5 x 0.75 mm²
 – up to 50 m cable length type LiYCY 5 x 1.0 mm²

External diameter 6.5 to 11 mm

Connect screen to PE only on the supply side.

¹⁾ Contacts C and F must not be connected!

Block circuit diagram / connection allocation

²⁾ PE is connected to the cooling body and the valve housing

³⁾ Protective conductor screwed to the valve housing and cover

⁴⁾ Ramp can be externally adjusted from 0 to 2.5 s; the same applies for T_{up} and T_{down}

⁵⁾ Output stages current regulated

⁶⁾ Low voltage detection is **not** carried out for component type 4WRAE 10-2X.
