

# 4/2 and 4/3 proportional directional valves, direct operated, with electrical position feedback, without/with integrated electronics (OBE)

**RE 29061/11.12**  
Replaces: 05.12

1/22

## Type 4WRE and 4WREE

Size 6 and 10  
Component series 2X  
Maximum operating pressure 315 bar  
Maximum flow: 80 l/min (size 6)  
180 l/min (size 10)

## Table of contents

Contents	Page
Features	1

Electrical connection, mating connectors	8, 9
Block diagram of the integrated electronics (OBE) for type 4WREE	10
Characteristic curves	11 to 17
Unit dimensions	18 to 22

## Features

- Direct operated proportional directional valve with electrical position feedback and integrated electronics (OBE) with type 4WREE
- Control of flow direction and size
- Operation by means of proportional solenoids with central thread and detachable coil
- For subplate mounting: Porting pattern according to ISO 4401
- Spring-centered control spool
- Control electronics
  - Type 4WREE: integrated electronics (OBE) with voltage or current input (A1 and/or F1)
    - Type 4WRE (4/3 version), separate order:
      - digital and analog amplifier in Euro-card format
      - analog amplifier in modular design
    - Type 4WRE...A (4/2 version), separate order:
      - analog amplifier in modular design

## Function, section

### Type 4WRE ...-2X/...

The 4/2 and 4/3 proportional directional valves are designed as direct operated devices in plate design. Operation is effected by proportional solenoids with central thread and detachable coil. The solenoids are controlled by external electronics.

#### Set-up:

The valve basically consists of:

- Housing (1) with connection surface
- Control spool (2) with compression springs (3 and 4) and spring plate (5 and 6)
- Solenoids (7 and 8) with central thread
- Position transducer (9)

#### Function:

- With de-energized solenoids (7 and 8), central position of the control spool (2) by compression springs (3 and 4) between spring plates (5 and 6)
- Direct operation of the control spool (2) by controlling a proportional solenoid, e.g. solenoid "b" (8)
  - Displacement of the control spool (2) to the left proportional to the electric input signal
  - Connection from P to A and B to T via orifice-type cross-sections with progressive flow characteristic
- Switching off of the solenoid (8)
  - The compression spring (3) brings the control spool (2) back into the central position

In the de-energized condition, the control spool (2) is held in a mechanical central position by the return springs. With control spool symbol "V", this position does not correspond to the hydraulic central position! When the electric valve control loop is closed, the control spool is positioned in the hydraulic central position.

#### Important note!

**The PG fitting (11) must not be opened. Mechanical adjustment of the adjustment nut located below is prohibited and damages the valve!**

#### Valve with 2 spool positions: (Type 4WRE...A...)

The function of this valve design basically corresponds to the valve with three spool positions. The 2 spool position valves are, however, only equipped with solenoid "a" (7). Instead of the 2nd proportional solenoid, there is a plug screw (10).

#### Notice!

Due to the design principle, internal leakage is inherent to the valves, which may increase over the life cycle.

#### Notice!

The tank line must not be allowed to run empty. With corresponding installation conditions, a pre-charge valve (pre-charging pressure approx. 2 bar) is to be installed.

## Function, section

### Type 4WREE ...-2X/...

The 4/2 and 4/3 proportional directional valves are designed as direct operated devices in plate design. Operation is effected by proportional solenoids with central thread and detachable coil. The solenoids are controlled by the internal electronics.

#### Set-up:

The valve basically consists of:

- Housing (1) with connection surface
- Control spool (2) with compression springs (3 and 4) and spring plate (5 and 6)
- Solenoids (7 and 8) with central thread
- Position transducer (9)
- Integrated electronics (13)
- Electric zero point adjustment (12) accessible via Pg7

#### Important note!

**The PG fitting (11) must not be opened. Mechanical adjustment of the adjustment nut located below is prohibited and damages the valve!**

#### Function:

- With de-energized solenoids (7 and 8), central position of the control spool (2) by compression springs (3 and 4) between spring plates (5 and 6)
- Direct operation of the control spool (2) by controlling a proportional solenoid, e.g. solenoid "b" (8)
  - Displacement of the control spool (2) to the left proportional to the electric input signal
  - Connection from P to A and B to T via orifice-type cross-sections with progressive flow characteristic
- Switching off of the solenoid (8)
  - The compression spring (3) brings the control spool (2) back into the central position

In the de-energized condition, the control spool (2) is held in a mechanical central position by the return springs. With control spool symbol "V", this position does not correspond to the hydraulic central position! When the electric valve control loop is closed, the control spool is positioned in the hydraulic central position.

#### Valve with 2 spool positions: (Type 4WREE...A...)

The function of this valve design basically corresponds to the valve with three spool positions. The 2 spool position valves are, however, only equipped with solenoid "a" (7). Instead of the 2nd proportional solenoid, there is a plug screw (10).

#### Notice!

Due to the design principle, internal leakage is inherent to the valves, which may increase over the life cycle.

#### Notice!

The tank line must not be allowed to run empty. With corresponding installation conditions, a pre-charge valve (pre-charging pressure approx. 2 bar) is to be installed.

**Technical data** (For applications outside these parameters please consult us!)

<b>general</b>			
Sizes		Size	6                      10
Weight	- Type 4WRE	kg	2.2                      6.3
	- Type 4WREE	kg	2.4                      6.5
Installation position	Any, preferably horizontal		
Ambient temperature range	- Type 4WRE	°C	-20 to +70
	- Type 4WREE	°C	-20 to +50
Storage temperature range		°C	-20 to +80
MTTF <sub>d</sub> values according to EN ISO 13849		Years	150 <sup>1)</sup> (for more information see data sheet 08012)

**hydraulic** (measured with HLP46,  $\vartheta_{\text{Oil}} = 40 \text{ °C} \pm 5 \text{ °C}$  and  $p = 100 \text{ bar}$ )

Maximum operating pressure	- Port A, B, P	bar	315	
	- Port T	bar	210	
Rated flow $q_{V, \text{rated}}$ with $\Delta p = 10 \text{ bar}$		l/min	4, 8, 16, 32	25, 50, 75
Recommended maximum flow		l/min	80	180
Hydraulic fluid	See table below			
Hydraulic fluid temperature range		°C	-20 to +80 (preferably +40 to +50)	
Viscosity range		mm <sup>2</sup> /s	20 to 380 (preferably 30 to 46)	
Maximum admissible degree of contamination of the hydraulic fluid, cleanliness class according to ISO 4406 (c)	Class 20/18/15 <sup>2)</sup>			
Hysteresis		%	≤ 0.1	
Range of inversion		%	≤ 0.05	
Response sensitivity		%	≤ 0.05	
Zero shift upon change of hydraulic fluid temperature and operating pressure		%/10 K	≤ 0.15	
		%/100 bar	≤ 0.1	

<sup>1)</sup> With control spool types E, E1, EA, W, W1, WA; in longitudinal control spool direction, there is sufficient positive overlap without shock/vibration load; observe the installation orientation with regard to the main direction of acceleration.

<sup>2)</sup> The cleanliness classes specified for the components must be adhered to in hydraulic systems. Effective filtration prevents faults and at the same time increases the service life of the components.

For the selection of the filters see [www.boschrexroth.com/filter](http://www.boschrexroth.com/filter)

Hydraulic fluid	Classification	Suitable sealing materials	Standards
Mineral oils and related hydrocarbons	HL, HLP	NBR, FKM	DIN 51524
Flame-resistant - Containing water	HFC (Fuchs HYDROTHERM 46M, Petrofer Ultra Safe 620)	NBR	ISO 12922

 **Important information on hydraulic fluids!**

- For more information and data on the use of other hydraulic fluids refer to data sheet 90220 or contact us!
- There may be limitations regarding the technical valve data (temperature, pressure range, service life, maintenance intervals, etc.)!
- The flash point of the process and operating medium used must be 40 K higher than the maximum solenoid surface temperature.

- **Flame-resistant – water-containing:** Maximum pressure differential per control edge 175 bar. Pressure pre-loading at the tank port > 20 % of the pressure differential; otherwise, increased cavitation.  
Life cycle as compared to operation with mineral oil HL, HLP 50 % to 100 %.

<sup>1)</sup> Due to the temperatures occurring at the surfaces of the solenoid coils, the European standards ISO 13732-1 and EN ISO 4413 need to be adhered to!

<sup>2)</sup> Separate order

 **Notice:** For information on the **environmental simulation testing** for the areas EMC (electromagnetic compatibility), climate and mechanical load see data sheet 29061-U (declaration on environmental compatibility).

## Electrical connection, mating connectors (dimensions in mm)

### Type 4WRE (without integrated electronics)

Mating connector CECC 75 301-803-A002FA-H3D08-G according to DIN EN 175301-803 and ISO 4400

Solenoid **a**, color gray  
separate order under the Material no. **R901017010**

Solenoid **b**, color black  
separate order under the Material no. **R901017011**

1 Mounting screw M3  
Tightening torque  $M_A = 0.5 \text{ Nm} + 0.1 \text{ Nm}$

### Inductive position transducer

Coil connection

Connection to plug-in connector

Mating connector 4-pole Pg7-G4W1F  
separate order under the Material no. **R900023126**

Connection cable:

Recommendation:

up to 50 m cable length type LiYCY 4 x 0.25 mm<sup>2</sup>

Connect shield to PE only on the supply side.

## Electrical connection, mating connectors (dimensions in mm)

### Type 4WREE (with integrated electronics (OBE))

Mating connector according to DIN EN 175201-804  
separate order under the Material no. **R900021267** (plastic version)

Angular design – separate order under the Material no. **R900217845**

Pin assignment see also block diagram page 10

Mating connector according to DIN EN 175201-804  
separate order under the Material no. **R900223890** (metal version)

Device connector allocation	Contact	Signal with A1 interface	Signal with F1 interface
Supply voltage	A	24 VDC ( $u(t) = 19.4$ to $35$ V); $I_{\max} = 2$ A	
	B	0 V	
Reference potential actual value	C	Reference contact F; $R_e > 50$ k $\Omega$	Reference contact F; $R_e < 10$ $\Omega$
Differential amplifier input	D	$\pm 10$ V command value; $R_e > 50$ k $\Omega$	4 to 20 mA command value; $R_e > 100$ $\Omega$
	E	Reference potential command value	
Measuring output (actual value)	F	$\pm 10$ V actual value (limit load 5 mA)	4 to 20 mA actual value, load resistance max. 300 $\Omega$
	PE	Connected to cooling element and valve housing	

**Command value:** Positive command value 0 to +10 V (or 12 to 20 mA) at D and reference potential at E result in flow from P → A and B → T.

Negative command value 0 to –10 V (or 12 to 4 mA) at D and reference potential at E result in flow from P → B and A → T.

For valves with 1 solenoid on side a (e. g. variant **EA** and **WA**), a positive command value 0 to +10 V (or 4 to 20 mA) at D and reference potential at E result in flow from P → B and A → T.

**Actual value:** Actual value 0 to +10 V (or 12 to 20 mA) at F and reference potential at C result in flow from P → A and B → T, actual value 0 to –10 V (or 4 to 12 mA) result in flow from P → B and A → T.

With valves with 1 solenoid, a positive actual value 0 to +10 V (or 4 to 20 mA) at F and reference potential at C result in flow from P → B and A → T.

**Connection cable:** Recommendation: – up to 25 m cable length type LiYCY 7 x 0.75 mm<sup>2</sup>

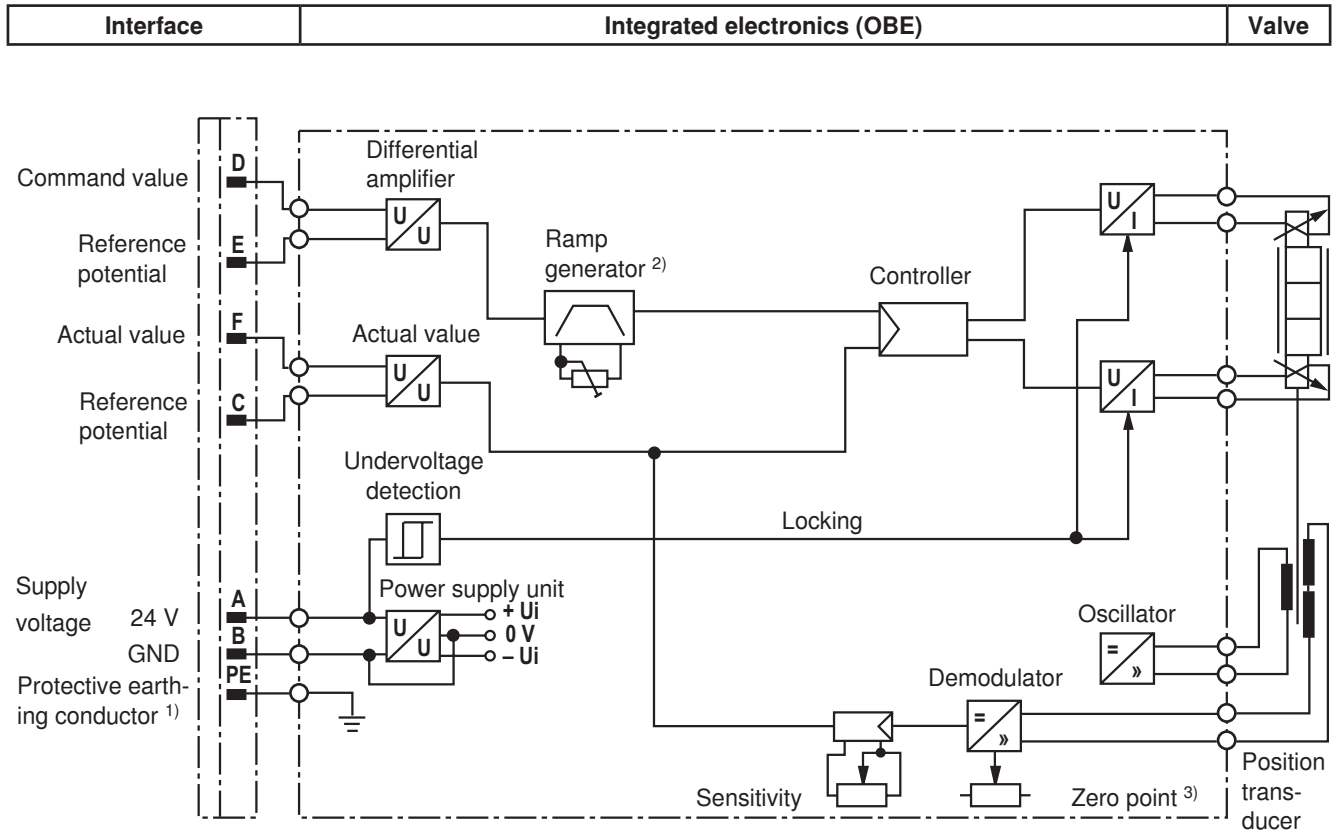

– up to 50 m cable length type LiYCY 7 x 1.0 mm<sup>2</sup>

External diameter see sketch of mating connector

Connect shield to PE only on the supply side.

# Integrated electronics (OBE) type 4WREE

## Block diagram / pin assignment

**Notice: Electric signals taken out via control electronics (e.g. actual value) must not be used for switching off safety-relevant machine functions!**

- 1) The protective earthing conductor (PE) is connected to cooling element and valve housing!
- 2) Ramp can be set from 0 to 2.5 s from the outside, identical for  $T_{up}$  and  $T_{down}$
- 3) Zero point can be set from the outside
