

Proportional directional valves, pilot operated, with electrical position feedback and integrated electronics (OBE)

RE 29075/08.13
Replaces: 08.04

1/22

Type 4WRKE

Size 10 to 35
Component series 3X
Maximum operating pressure 350 bar
Maximum flow 3,000 l/min

Features

- Pilot operated 2-stage proportional directional valve with electrical position feedback of the main control spool and integrated electronics (OBE)
- Control of flow direction and size of a flow
- Operation by means of proportional solenoids
- Subplate mounting:
Porting pattern according to ISO 4401
- Electrical position feedback
- Spring-centered main control spool
- Pilot control valve:
Single-stage proportional directional valve
- Main stage with position control

Pilot oil drain external

Detailed

Example:

- 1 Pilot control valve type 4WRAP 6...
- 2 Main valve
- 3 Pressure reducing valve
type ZDR 6 DP0-4X/40YM-W80
- 4 Integrated electronics (OBE)

Function, section

Pilot control valve type 4WRAP 6 W7.3X/G24... (1st stage)

The pilot control valve is a direct operated proportional valve. The control edge dimensions have been optimized for use as a pilot control valve for proportional directional valves type 4WRKE.

The proportional solenoids are pressure-tight, wet-pin AC solenoids with detachable coils. They transfer electric current proportionally into mechanical force. An increase of the current strength results in a correspondingly higher magnetic force. The set magnetic force remains the same during the total control stroke.

The pilot control valve mainly consists of the housing (1), the proportional solenoid (2 and 3), the valve control spool (4) and springs (5 and 6).

In a non-actuated state both actuators are connected to the tank. If one of the two solenoids (2 or 3) is excited, the magnetic force will move the valve control spool (4) towards the spring (5 or 6).

After having overcome the overlap area, the connection of one of the two actuators is blocked and the connection to the pressroom is made. There is a flow from P to the control chamber of the main stage.

Type 4WRAP 6 W7.3X/G24...

Function, section, valve particularities

Valves of type 4WRKE are 2-stage proportional directional valves. They control the of flow direction and size.

The main stage is position-controlled so that the control spool position is independent from flow forces also in the case of bigger flows.

The valves mainly consist of the pilot control valve (1), the housing (8), the main control spool (7), the covers (5 and 6), the centering spring (4), the inductive position transducer (9) and the pressure reducing valve (3).

If there is no input signal, the main control spool (7) will be kept in the central position by the centering spring (4). Both control chambers in the covers (5 and 6) are connected to the tank via the valve control spool (2).

The main control spool (7) is connected to suitable control electronics via the inductive position transducer (9). Both the change of position of the main control spool (7) and the change of the command value at the junction summing of the amplifier create a differential voltage.

During the comparison of command and actual value a possible control deviation is determined via the electronics and

the proportional solenoid of the pilot control valve (1) is supplied with current.

The current induces a force in the solenoid which operates the control spool via a plunger in a row. The flow which has been released via the control cross sections causes an adjustment of the main control spool.

The main control spool (7) with the core of the inductive position transducer (9) attached to it is displaced until the actual value corresponds to the command value. In a controlled state the main control spool (7) is balanced and kept in this control position.

The control spool stroke and the control opening change proportionally to the command value.

The control electronics are integrated in the valve. By adjusting valve and electronics, the deviation in series production of the devices is kept low.

The tank lines must not be allowed to run empty; a preload valve is to be installed in the case of a corresponding installation condition (counterbalance pressure approx. 2 bar).

Valve particularities

- The 2nd stage is mainly built up from components of our proportional valves.
- The zero point adjustment at "**zero point main stage**" is made at the factory and can be adjusted in a range of $\pm 30\%$ of the nominal stroke via a potentiometer in the control electronics. Access in the integrated control electronics by removing a plug screw on the front side of the cover housing.

- When the pilot control valve or the control electronics are exchanged, they are to be re-adjusted. All adjustments may be implemented by instructed experts only.

Notice!

Changes in the zero point may result in damage to the system and may only be implemented by instructed specialists!

Technical data (for applications outside these parameters, please consult us!)

general							
Sizes	Size	10	16	25	27	32	35
Installation position and commissioning information		Preferably horizontal, see RE 07800

Hydraulic fluid			See table page 7						
Maximum admissible degree of contamination of the hydraulic fluid - cleanliness class according to ISO 4406 (c)			Pilot control valve: Class 17/15/12 ¹⁾ Main stage: Class 20/18/15 ¹⁾						
Hydraulic fluid temperature range	°C		-20 to +80, preferably +40 to +50						
Viscosity range	mm ² /s		20 to 380, preferably 30 to 45						
Hysteresis	%		≤ 1						
Response sensitivity	%		≤ 0.5						

¹⁾ The cleanliness classes stated for the components need to be maintained in hydraulic systems. Effective filtration prevents faults and simultaneously increases the life cycle of the components.

For the selection of the filters see
www.boschrexroth.com/filter

Technical data (for applications outside these parameters, please consult us!))

Hydraulic fluid	Classification	Suitable sealing materials	Standards
Mineral oils and related hydrocarbons	HL, HLP	NBR, FKM	DIN 51524
Flame-resistant – containing water	HFC (Fuchs HYDROTHERM 46M, Petrofer Ultra Safe 620)	NBR	ISO 12922
Phosphoric acid ester	HFD-R	FKM	

 **Important information on hydraulic fluids!**

- For more information and data on the use of other hydraulic fluids refer to data sheet 90220 or contact us!
- There may be limitations regarding the technical valve data (temperature, pressure range, life cycle, maintenance intervals, etc.)!
- The flash point of the process and operating medium used must be 40 K greater than the maximum solenoid surface temperature.

- **Flame-resistant – containing water:** Maximum pressure differential per control edge 175 bar. Pressure pre-loading at the tank port > 20% of the pressure differential; otherwise, increased cavitation.
- Life cycle as compared to operation with mineral oil HL, HLP 50% to 100%

electrical

Voltage type	Direct voltage
Signal type	Analog
Maximum power	W 72 (average = 24 W)
Electrical connection	Mating connector according to DIN EN 175201-804
Protection class of the valve according to EN 60529	IP65 with mating connector mounted and locked
Control electronics	Integrated in the valve, see page 8

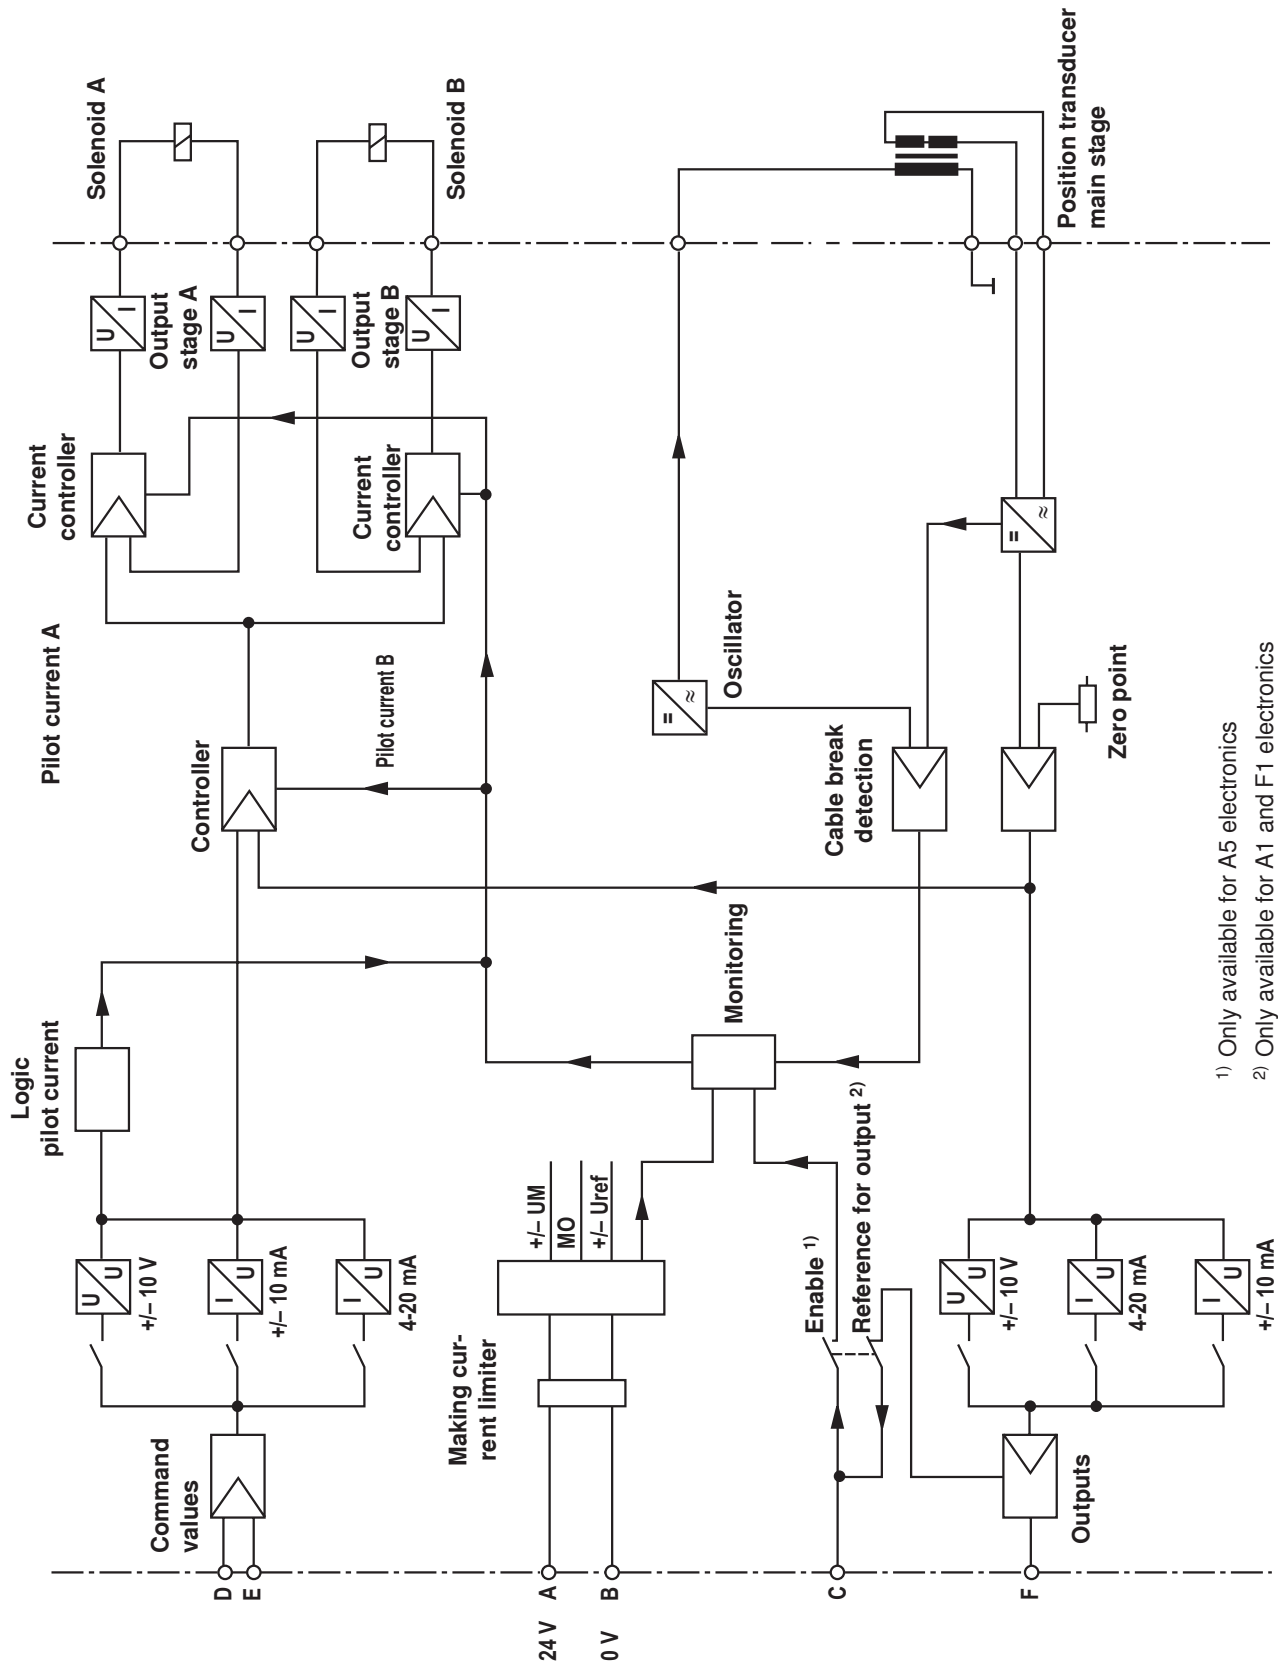

Connector pin assignment	Contact	Signal with A1	Signal with F1	Signal with A5
Supply voltage	A	24 VDC (18 to 35 VDC); $I_{max} = 1.5$ A; impulse load ≤ 3 A		
	B	0 V		
Reference (actual value)	C	Reference potential for actual value (contact "F")	Enable 4 to 24 V	
Differential amplifier input (Command value)	D	± 10 V	4 to 20 mA	± 10 V
	E	0 V reference potential to pin D		0 V reference potential for pin D and F
Measuring output (actual value)	F	± 10 V	4 to 20 mA	± 10 V
	PE	Connected to cooling element and valve housing		

Command value: Reference potential at E and positive command value at D result in flow from P → A and B → T.
Reference potential at E and negative command value at D result in flow from P → B and A → T.

Connection cable: Recommendation: – Up to 25 m line length: Type LiYCY 7 x 0.75 mm²
– Up to 50 m line length: Type LiYCY 7 x 1.0 mm²
Only connect the shield to PE on the supply side.

Notice: **Electric signals taken out via valve electronics (e.g. actual value) must not be used for switching off safety-relevant machine functions!**

Block diagram of the integrated electronics (OBE)

1) Only available for A5 electronics

2) Only available for A1 and F1 electronics
