

# Directional spool valve type SG and SP

Versions for direct pipe connection or manifold mounting

Pressure  $p_{max}$  = 400 bar  
 Flow  $Q_{max}$  = 100 lpm

## Version for pipe connection

## Actuation modes (illustration represents size 3)

## Version for manifold mounting

For brief description and main data, see table 4 in sect. 2.1!

## 1. General

Directional spool valves are generally employed in oil-hydraulic systems. They serve to control the oil flow and thus the direction of movement of the consumers (hydraulic cylinders and hydr. motors). These valves are designed for individual installation. They feature an internal leakage compensation, hence no leakage connection is required.

All valve versions are available either for:

- direct pipe connection or
- manifold mounting

Every directional spool valve consists of a control element (valve spool incl. housing) and a directly mounted actuation.

The valve unit is manufactured entirely of steel, thus rendering the housing insensitive to pressure surges and leakage as can sometimes be observed after prolonged periods of use with cast housings. This is caused usually by hairline cracks which form and migrate externally, especially when the permissible pressure range has been fully utilized. Such phenomena are ruled out right from the start. The housing bores are diamond-honed. The hardened and ground valve spools are polished/deburred. This preserves their roundness and exact geometric shape (the control edges are not worn down or widened) ensuring even sealing gaps with a minimum leakage rate.

Cast material (zinc and aluminum die casting) is used solely for non-pressurized components e.g. actuation housing, spring dome, base plates, etc. There is also a version available where the housing of the manual actuation is made of spheroidal cast iron which is intended especially for rough operation conditions or when these valves are connected in series.

## 2. Available versions, main data

### 2.1 Type coding

Order examples: Version for pipe connection

Version for manifold mounting

**SG 3 L 3E - AK - 120**  
**SP 3 G - MD 23/24**

For actuation mode, see table 4

Desired pressure setting (bar) for the pressure limiting valve

**Table 1:** Basic type and size

Coding	Connection desig	Port size		Flow 1) Q <sub>max</sub> (lpm)	Pressure p <sub>max</sub> (bar) at ports		Dep. on actuation, see tab. 4 2)
		A, B, P	R		A, B, P	R	
<b>SG 0</b>	Pipe mount- ing acc. to ISO 228/1 (BSPP)	G 1/4	G 3/8	12	400		
<b>SG 1</b>		G 3/8		20	400		
<b>SG 2</b>		G 3/8		30	400		
<b>SG 3</b>		G 1/2		50	400		
<b>SG 5</b>		G 1		100	315		
<b>SP 1</b>	Manifold mounting	See dimensional drawings in sect. 4 ++		12	400		
<b>SP 3</b>				50	400		
<b>SP 5</b>				100	315		

- 1) Recommended value; if the pump output flow is near the specified limits, the plunger side must be connected at A if differential cylinders are being used as consumers
- 2) In SP design with flow pattern for parallel connection depending on actuation, although not in excess of 100 bar
- 3) Standard material for models with pressure limiting valve
- 4) Normally only for special applications: Resistant to pressure surges up to 300 bar (pay attention to permissible pressures for actuations). For maritime versions, see D 6511/1
- 5) Port R must be connected to the tank as leakage drain
- 6) Not available for size 0 and 1
- 7) Without pressure limiting valve
- 8) Only available with manual actuation Y... acc. to D 6511/1 (detent, four switching positions)
- 9) Not available for SP.. manifold mounting
- 10) Not for size 5
- 11) Observe the position of the ports in the dimensional drawings, see also notes in sect. 3 ++
- 12) Version to the avoidance of decompression surges (only size 5), see sect. 2.2
- 13) Not available for type SG 5 with pressure limiting valve
- 14) Not available for type SG 0(1)

**Table 3:** Optional pressure limiting valve (only type SG)

Basic type	Spring housing made of				Pressure range (bar)
	Zinc die casting <sup>3)</sup>		Steel <sup>4)</sup>		
	perm. pressure at R = 20 bar				
	tool ad justable	manu. adjust.	tool ad justable	manu. adjust.	
SG 0	<b>1B</b>	<b>2B</b>	---	---	(315) ... 400
SG 1	<b>1C</b>	<b>2C</b>	---	---	(160) ... 315
	<b>1E</b>	<b>2E</b>	---	---	(80) ... 160
	<b>1F</b>	<b>2F</b>	---	---	20 ... 80
SG 2	<b>3B</b>	<b>4B</b>	<b>6B</b>	<b>7B</b>	(315) ... 400
SG 3	<b>3C</b>	<b>4C</b>	<b>6C</b>	<b>7C</b>	(160) ... 315
SG 5	<b>3E</b>	<b>4E</b>	<b>6E</b>	<b>7E</b>	(80) ... 160
	<b>3F</b>	<b>4F</b>	<b>6F</b>	<b>7F</b>	20 ... 80

Coding is omitted for versions without pressure limiting valve!

**Essential note:**

Permissible pressure at R depends on the spring housing material (see above). Connection R must always be the return, any pressure at R adds itself to the pressure setting. Do not use for series connections. In parallel connections, only equip one valve with a pressure limiting valve.

**Attention:** Pressure limiting valves are not available for all flow pattern symbols (see table 2).

**Table 2:** Flow pattern symbols

Basic flow pattern symbols and switching positions Avail. for type SG..	Suited for parallel connection	G	C	D	E	N	W	R	V <sup>5)</sup>	Q <sup>5) 6)</sup>	Z <sup>6) 7) 10)</sup>	U <sup>6) 7)</sup>	B <sup>7) 8) 9) 10)</sup>
With pressure limiting valve Avail. for type SP..	Suited for series connection	L <sup>13)</sup> LS <sup>12) 13)</sup>	P <sup>13)</sup> FS <sup>12) 13)</sup>	F <sup>13)</sup> FS <sup>12) 13)</sup>	H	Y <sup>7) 11)</sup> <sup>14)</sup>	S <sup>13)</sup> SS <sup>12) 13)</sup>	X <sup>7)</sup>	K <sup>6) 7) 8) 9) 10)</sup>	<b>Remarks on use:</b> If several single valves are being used in a system, attention must be paid to the connection (parallel, series). In a series connection, the permissible system pressure = permissible pressure in the return! Hence, not all modes of actuation are suitable for a series connection (sect. 4).			
Overlap between two switching positions:		None (neutral)		Positive (intermediate blocked position)		Negative (slight intermediate blocked position)							

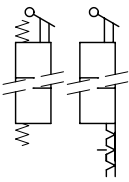

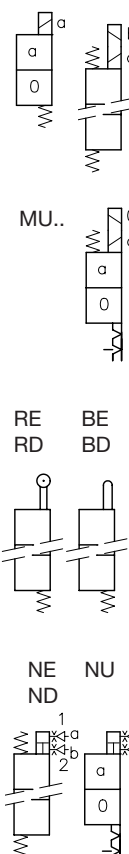

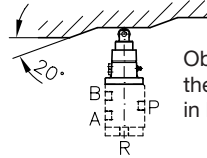

**Check valve insert type ER 21 optionally available for type SP 1:**

The check valve type ER 21 must be ordered separately.

The check valve insert type ER 21 acc. to D 7325 may be installed in port P, when required. This is advantageous when several directional spool valve sections (flow pattern symbols D, E, G, N, R, V, and W) are connected in parallel and situations might occur where two valve sections are actuated subsequently but simultaneous. Thereby preventing a pressure drop of the first actuated consumer.

**Table 4:** Actuation modes (Selection table, for more detailed information refer to the corresponding pamphlets)

Actuation	Coding				Pressure P <sub>max</sub> (bar) at ports A, B, P R <sup>1)</sup>		Notes, remarks	Symbols	
<b>Manual</b> (spring return/ detent) acc. to D 6511/1	Size	With spring return 0 and 1   2, 3 and 5		With detent 0 and 1   2, 3 and 5			<b>AD, CD:</b> (zinc die cast.) for normal conventional use. Only for parallel connection! <b>AK, CK:</b> (spheroidal cast iron) for especially rough use. Pressure fluid Hydraulic oil conf. DIN 51524 part 1 to 3: ISO VG 10 to 68 conf. DIN 51519  
Viscosity limits: min. approx. 4, max. approx. 1500 mm<sup>2</sup>/s  
Optimal operation: approx. 10 ... 500 mm<sup>2</sup>/s  
Also suitable for biological degradable pressure fluids types HEPG (Polyalkylenglycol) and HEES (Synth. Ester) at service temperatures up to approx. +70°C

Temperature range Ambient: approx. -40 ... +80°C  
Fluid: -25 ... +80°C, Note the viscosity range  
Permissible temperature during start: -40°C (observe start-viscosity!), as long as the service temperature is at least 20K higher for the following operation  
Biological degradable pressure fluids: Observe manufacturer's specifications. Considering the compatibility with seal material not over +70°C.  
**Attention:** Observe the restrictions regarding the permissible operation duration of the actuation solenoids, see sect. 3.1 in D 7055!

### Notes for flow pattern symbols LS, FS, and SS:

Directional spool valves to the avoidance of decompression surges (only available for type SG 5)

It is common practice in the shipbuilding industry to utilize directional spool valves with big sized ports (even for very low flows) to minimize the back pressure within the usually very lengthy pipe system. Such high in-pipe volume usually cause pressure surges being very straining for the complete hydraulic equipment. The directional spool valves versions type SG 5 ... S feature valve spools with long notches which cause a rather smooth pressure built-up during switching operations, thus minimizing such pressure surges. The big-port design (G 1) enables use of pipes  $\varnothing 25$  with accordingly low back pressure.  
Technical data: All technical data and dimensions are like with the standard version, beside the  $\Delta p$ -Q curve.

$\Delta p - Q$  - characteristics

The flow resistance values (recommended values) are understood without pipe fittings (SG) and without manifold (SP)

Type	Valves for parallel connections	Valves for series connections	Note
SG 0 SG 1 SP 1			<p>Double-acting consumers with unequal area ratios (differential cyl.): The return flow <math>Q_{return}</math> may be lower or higher than the inlet flow <math>Q_{inlet}</math> (pump delivery flow) depending on the direction of movement. The flow resistance <math>\Delta p_{total}</math> of the directional spool valve must always be related to the inlet side (connection P):</p> $\Delta p_{total} = \Delta p_{in} + \Delta p_{out} \frac{A_{out}}{A_{in}}$
SG 2			<p>Directional spool valves for parallel connection: The cylinder part of the piston side (larger surface) should always be connected to port A.</p>
SG 3 SP 3			$Q_{return} = Q_{in} \frac{A_{out}}{A_{in}}$ <p>Fluid viscosity during tests approx. 60 mm<sup>2</sup>/s</p>
SG 5 SP 5			

### 3. Dimensions All dimensions in mm, subject to change without notice!

#### 3.1 Directional spool valves for direct pipe connection (For actuations, see sect. 3.3, on page 8 ++)

##### Type SG 0 and SG 1

M 8, 10 deep, core bore  $\varnothing 6.5$  is a thru-hole

M 8, 10 deep (rear side), core bore  $\varnothing 6.5$  is a thru-hole

1) Port B is omitted with coding N, S, and R

##### Version with pressure limiting valve

(For pressure adjustment, see sect. 2.2)

Size	Coding	a	b	c	d	h	Ports ISO 228/1 (BSPP)	
							P, A, and B	R
0	D, E, G, W, N, R	17.5	20.5	9.5	20.5	59.5	G 1/4	G 3/8
	F, H, L, P, V, S, X	21.5	12	9.5	20.5	59.5	G 1/4	G 3/8
1	Y	18.5	21.5	11	17.5	70	G 3/8	G 3/8
	Other codings	18.5	21.5	11	17.5	59.5	G 3/8	G 3/8

##### Type SG 2 and SG 3 <sup>2)</sup>

Dimension a = 30 for coding B, C, K, Y  
Dimension b = 11 for coding U  
16 for other codings

##### Version with pressure limiting valve

(For pressure adjustment, see sect. 2.2)

Pay attention to the differing dimensions of the base plate for the pressure compensated version with pressure actuation (see D 6250).

Ports ISO 228/1 (BSPP):  
P, R, A, B = G 3/8 (SG 2)  
G 1/2 (SG 3)

##### Type SG 5 <sup>2)</sup>

Ports ISO 228/1 (BSPP):  
P, R, A, B = G 1

<sup>2)</sup> Port B is omitted with coding N, S, R, U, and X.  
Ports P and A are mixed up with coding Y.  
Port A is stamped R with coding U

##### Version with pressure limiting valve

(For pressure adjustment, see sect. 2.2)

**Important notes (for SG valves, all sizes)**

Washers must be installed between valve and mounting area to prevent warping of the valve housing in case of uneven mounting surfaces.

**Type SG 0 and SG 1**

Washer ISO 7089/  
7090-6.4-140 HV-A2K

Washer ISO 7089/7090-  
8.4-140 HV-A2K

**Type SG 3 and SG 5**

Washer  
ISO 7089/7090-  
10.4-140-HV-A2K

**3.2 Directional spool valve for manifold mounting** (For actuations, see sect. 3.3 on page 8 ++)

**Type SP 1**

**Attention:** Port B is omitted with directional spool valves coding N, S, and R

Position of the ports with coding Y

Check valve insert type ER 21 (not available with coding Y, see also sect 2.1, table 2).

Sealing of ports A, B, P, and R via O-rings NBR 90 Sh. (There is also a seal kit available, order no. DS 5650/1-1)

Ports	A, B, R	P
Ød	7	7 to 9
O-ring	8x2	14x2

**Type SP 3 1)**

**Type SP 5 1)**

Dimensions a<sub>1</sub>  
= 11 with coding  
D, E, G, N, R, U, V, W, X and Z  
15 with coding  
C, F, L, P, S, H

Sealing of ports A, B, P, and R via O-rings NBR 90 Sh. (There is also a seal kit available, order No.)

Type	Ød	O-ring	Order no.
SP 3	11	12x2.5	DS 5650/1-3
SP 5	16.5	20x2.5	DS 5650/1-5

1) Port B is missing with coding N, S, R, U, and X. Ports A and R can be used alternatively as return with coding U

### 3.3 Actuation modes, orientation and main data

For missing specifications, see respective pamphlets!

#### Manual actuation

Size 0 and 1 coding **A, AK, C** and **CK**

Flange (mounting) area with directional spool valve type SP 1

Flange (mounting) area with directional spool valve type SP 3(5)

Flange (mounting) area with directional spool valve type SP 3

#### Solenoid actuation

$c = 28$  for version with DC-solenoid  
 $= 35$  for version with AC-solenoid  
 This dimension depends on the manufacturer and may be max. 40 mm (acc. to DIN 43650)!

#### Pressure actuation

Standard versions, coding **NE, ND, NU** and **NM**

Ports ISO 228/1 (BSPP): 1 and 2 = G 1/4

Size	$h_3$
0 and 1	60
2, 3 and 5	97

Flange (mounting) area with directional spool valve type SP..

Size	Coding	a	b	$b_1$	h	$h_1$
0 a. 1	ME.. and MD..	32	39	51	104	135
2, 3 and 5	ME(D, U) 2/..	54	51.5	60	158	199
	ME(D, U) 3/..	54	$\varnothing 72$	$\varnothing 72$	158	199

#### Double actuation coding **KM** and **KD**

Ports ISO 228/1 (BSPP): 1 and 2 = G 1/4

#### Mechanical actuation

Coding **RE** and **RD**

Coding **BE** and **BD**

Size	0 and 1	2, 3, and 5
$h_2$	66	102
s	5	10
